Loi Cheng
10/13/2020

Write a short R Shiny app on a topic that might be appropriate for a final project.

Include a pdf file that explains your choice of topic and that lists ten ideas from this course that you have incorporated into your app. A list of ten will get you full credit, but please don't make the ideas too trivial. Express an opinion about whether your app could be extended into a more significant project.

The choice of topic is something that might be useful for math education. It has tests on basic arithmetic, matrix operations, and cyclic groups. The app could be extended to be more significant by adding more variety to the tests.

1. modals
2. mathjax
3. stylesheet
4. sliders
5. matrix notation
6. matrix multiplication
7. buttons
8. cyclic notation
9. cyclic multiplication
10. dataframe
11. circle routes
